Masury, Ohio – October 7, 2015 – Specialty Strip & Oscillating, Inc., 1262 Standard Ave., announces the update of their oscillator equipment producing a higher quality oscillated coil with additional widths and sizes. They now have the capabilities to process an oscillated coil up to 2.5 inches in width, a coil weight of 5,000 lbs, better edge control and precise winding. This allows the customers who purchase oscillated coils from Specialty Strip & Oscillating to limit the number of welds in their product. The total range for processing an oscillated coil at Specialty is .250" to 2.50" in width, gauge from .009" to .125" and face size of 3" to 14".

Specialty Strip & Oscillating, Inc. is a supplier of conventional slit and oscillate coils in cold-rolled low carbon, high carbon, alloy and stainless steel. Specialty Strip provides coils with 20 to 25 miles of continuous strip.

Further capabilities of Specialty Strip coils include welds annealed and ground, and slit and deburred – as well as straight-patterned coil walls wound on steel liners, fiber cores and spools. Finishes are achieved through Galvalume, hot dip galvanizing, electro-galvanizing, galvannealing and prepainting on cold-rolled strip and sheet. Customers have the ability to run an oscillate coil uninterrupted for 10 to 15 times longer than with conventional ribbon-wound coils. This eliminates downtime, coil-end scrap loss, coil telescoping and tangling. The result is an increase in savings, efficiency and productivity.

Specialty Strip & Oscillating, Inc. is under the direction of Thomas von Philp, President, and Adam von Philp, Vice President.

To place an order for an oscillated coil, please call Tom von Philp or Adam von Philp at 866-658-5282, email generalinfo@specialtystrip.com or visit specialtystrip.com for more information.
